Key Findings

Growth in the shelter system is not due to new homeless families with children entering shelter, but to long-term stayers and repeat entrants.

Only 16% of families with children living in shelter in the last half of 2014 entered for the first time during the 2014 calendar year. The remaining 84% entered for the first time prior to 2014.

Even in the short term, more families are returning to shelter. In FY 2015, 17% of all families with children exiting shelter to permanent housing returned to shelter in less than one year. In FY 2005 the one-year return to shelter rate was less than 1%.

Close to half (46%) of all homeless parents and children lived in either a cluster site apartment or hotel in December 2014.

Domestic violence, not eviction, was the leading cause of shelter entry in New York City from July to December 2014.

One out of every five (18%) people living in a New York City shelter in December 2014 was a child age five or younger.

In under four years, the number of children aged 6–13 living in shelter grew by 85% (March 2011–December 2014).

Introduction

New York City faces an enormous challenge.

Despite a renewed focus on homelessness by the administration of Mayor Bill de Blasio, the number of families with children in need of emergency shelter continues to grow. In Fiscal Year (FY) 2015 more families with children entered shelter than at any point since FY 2010. The system is stretched beyond capacity by the over 12,000 families living in its Tier II facilities, hotels, and cluster sites nightly. These families include over 23,000 children whose lives and educations have been impacted by housing instability, many of whom are entering shelter for a second or third time, despite their young age.¹

Return to shelter is a critical factor contributing to the growth of family homelessness in New York City. Among families living in shelter at any point during the last half of 2014, 84% had entered shelter for the first time prior to 2014. This trend is reflective of the focus on moving families out of the shelter system as quickly as possible, with limited attention directed towards addressing the underlying reason that each family entered shelter in the first place.²

Contributing to families cycling back through the shelter system is the fact that homelessness in New York City is not only experienced by families living in the shelter system, but also by those living doubled up with other families throughout the city's many neighborhoods and communities. Over 84,000 children attending New York City Public Schools were homeless in SY 2013–14 and for every one child living in shelter, two children were homeless living in some other temporary setting. This means that families exiting

shelter often find themselves returning to communities destabilized by poverty and homelessness—and that for every family with children that exits shelter, there are likely two more homeless families with children at risk for entering the system. Until return to shelter rates are reduced, and communities receive the resources and assistance they need to foster economic and social stability for children and their parents, it is unlikely that trends in family homelessness and shelter entry will be reversed.³

In order to further the conversation about the dynamics that drive family homelessness in New York City's communities, *On the Map: The Dynamics of Family Homelessness in New York City* provides a geographic analysis of demographic patterns and newly-available data on family homelessness. *On the Map* is an easy-to-use resource for policymakers, budget analysts, service providers, and community leaders and organizations.

¹ New York City Mayor's Office of Operations, *Mayor's Management Report*, FY 2015.

² New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2015.

³ The Institute for Children, Poverty, and Homelessness, *The Atlas of Student Homelessness in New York City*, August 2015.

User's Guide

The goal of *On the Map* is to help users better understand the issue and context of family homelessness in their neighborhoods and in New York City. It can be used independently, or in conjunction with the 2014 *On The Map: Atlas of Family Homelessness*, which provides individual City Council district maps with shelter locations and Homebase sites.

Why is this information needed?

This information is assembled to help the user accomplish a variety of goals, including:

To identify ways to improve family shelter services through providing a more detailed **picture of the parents and children** living in shelter.

To learn more about why families from different communities apply for and **enter shelter**.

To examine the educational, economic, and community characteristics in a **City Council district** that influence family homelessness.

To use as a tool for **planning and advocacy**.

To **raise questions** and determine what additional data are required to make effective public policy.

What information does *On the Map* provide?

On the Map is divided into four sections.

Section 1 provides charts and tables that describe the extent of family homelessness in New York City: its growth over time, the type of shelter where families stay, the number of families in shelter who entered during a previous year, the rate at which families are returning to shelter, the neighborhoods where families live before they enter shelter, and homelessness among students as a proxy for community-wide housing instability.

Section 2 looks at the reasons why families apply for and enter shelter citywide, and then explores differences by community district.

Section 3 is a series of New York City maps and tables that shows factors such as: children living in poverty, single mothers in poverty with children under five, severe rent burden, and overcrowding. The maps provide an opportunity to compare neighborhoods to one another as well as the city as a whole, and the tables provide context for where each community ranks in comparison to other districts. Wherever possible, maps and tables are shown at the City Council district level, however in cases where that is not possible, data are displayed by community district.

The Appendix provides a glossary defining the important terms used in *On the Map*, as well as overarching tables for City Council and community district data.

What are the limitations of the information provided here?

Some of the challenges of exploring family homelessness in New York City are the many different ways in which data are collected. Information might be collected at the level of the city as a whole, the community district, or City Council district. The other barrier to a better understanding of the issue is the timeliness and availability of the data. Government officials and community leaders often make decisions affecting today's homeless families based on dated information, though more current administrative data could be made publicly available.

Overview:
**Family Homelessness
in New York City**

Overview: Family Homelessness in New York City

Family homelessness continues to rise across New York City, adversely affecting the poorest children and often destabilizing entire neighborhoods. In just three and a half years, from July 2011 through December 2014, roughly 70,000 families with children applied for shelter, and over 36,000 entered the system. While families from every New York City community become homeless, those living in some areas of the city face a much greater risk. The information in this section provides an overview of the growth in the number of families with children living in New York City shelters, the communities where families lived prior to entering shelter, factors within the shelter system contributing to growth, the type of shelter where families are being housed while they are homeless, and how student homelessness can serve as a proxy for community-wide housing instability.

Key Findings

Over 70% of all homeless people living in the New York City shelter system in December of 2014 were parents and their children.

One out of every five (18%) homeless people in shelter was a child age five or under in December 2014.

Five community districts accounted for one out of every five (22%) families entering shelter during the three and a half years from July 2011 through December 2014. These districts included **East New York**, **Bedford-Stuyvesant**, **Concourse/Highbridge**, **University Heights**, and **Unionport/Soundview** (K05, K03, B04, B05, and B09).

Close to half (46%) of homeless parents and children in shelter lived in either cluster site apartments or hotels in December 2014.

The majority of families with children in shelter between July 2014 and December 2014 entered shelter for the first time in 2005.

The percentage of families returning to shelter within one year of their exit to permanent housing increased sharply between FY 2005 and FY 2015 from less than 1% to 17%.

The full extent of family homelessness is not represented by the shelter census. Student homelessness serves as a proxy for the larger number of families in the city experiencing housing instability.

Family Homelessness Continues to Grow

From March 2002 to December 2014, the number of families with children living in New York City shelters increased by roughly 4,800, while the number of children increased by over twice that, or by close to 10,500 (62%).

Young children age five and under continue to make up the largest age group of people living in City shelters. Over 12,000 children aged five or younger stayed in shelter in December 2014.

Since March 2011, family shelters have seen a rapid increase in the number of children aged 6 through 13. This group increased by 85% in less than four years (March 2011–December 2014).

Both community factors and shelter policies contribute to the reasons why many families enter shelter more than once.

Families and Children Living in New York City Shelters

March 2002–December 2014, by Month and Year

■ Ages 0–5 ■ Ages 6–13 ■ Ages 14–17 □ Families

Note: "Families" years 2002–2007 are sourced from New York City Department of Homeless Services (DHS) Critical Activities Reports; years 2008–2014 are sourced from DHS Daily Report monthly averages. Number of children by age reflects the total count of individual children served in DHS family shelters per month, while "Families" reflects the daily average number of families served in the shelters during that month. Prior to 2008, family counts included both families with children and adult families. Beginning in 2008, DHS began counting families with children and adult families separately, and the graph for those years shows only families with children.

Source: New York City Department of Homeless Services, *Critical Activities Report*, FY 2002–FY 2011; New York City Department of Homeless Services, *Daily Report*, 2008–2014; New York City Department of Homeless Services, *DHS Data Dashboard Charts*, FY 2012–FY 2015.

Parents and Children Are the Majority of Shelter Residents

In December 2014, one out of every five people living in a New York City homeless shelter was a child age five or under.¹

Over two-thirds (70%) of all people living in shelter at the end of 2014 were parents and their children.

The large number and rapid growth of children living in shelter is a crisis; however, while in shelter the opportunity exists to address their developmental needs in order to promote their educational and emotional growth.

Individuals in Shelter, by Family Type

¹ New York City Department of Homeless Services, *DHS Data Dashboard Fiscal Year to Date 2015*.

Communities Where Families Lived Prior to Entering Shelter

In just three and a half years, from July 2011 through December 2014, over 36,000 families with children were found eligible for shelter; close to 70,000 applied.

The citywide shelter eligibility rate was 52%. This rate varied from 35% in **Greenwich Village** (M02) to 72% in **Midtown** (M05) from July 2011–December 2014.

The number of families with children entering shelter by community district during the three-and-a-half year period ranged from 11 in **Greenwich Village** (M02) to close to 2,000 in **East New York** (K05).

8,000 families from five community districts made up one out of every five (22%) families found eligible for shelter in New York City between July 2011 and December 2014. These communities were: **East New York, Bedford-Stuyvesant, Concourse/Highbridge, University Heights, and Unionport/Soundview** (K05, K03, B04, B05, and B09), which had an overall eligibility rate of 53%.

Seven of the top ten community districts for shelter entry in the first half of FY 2015 were located in the Bronx (**University Heights, Concourse/Highbridge, Mott Haven, Williamsbridge, Morrisania, Unionport/Soundview, and East Tremont**, Districts B01, B03, B04, B05, B06, B09, and B12) and three in Brooklyn (**East New York, Bedford-Stuyvesant, and Brownsville**, Districts K03, K05, and K16).

The ten neighborhoods listed above accounted for 2,614 families entering shelter in just six months representing 40% of family shelter entrants and 39% of applicants from July–December 2014.

Public policy that expects to effectively curtail shelter entry must be based on a comprehensive understanding of local dynamics.

Extent of Housing Instability and Homelessness in New York City Neighborhoods

Taking the total population of each community district into account and calculating the shelter entry rate per 1,000 families allows for a more accurate comparison across communities. It also highlights communities whose shelter entry numbers are lower but are significantly affected by homelessness.

The average annual rate of family shelter entry in New York City was 5.6 per 1,000 families between FY 2012 and the first half of FY 2015. However, the rate varied greatly by community district ranging from a low of 0.1 per 1,000 families in **Bayside**, Queens (Q11), to a high of 19.1 per 1,000 families in the **Morrisania/East Tremont** area of the Bronx (B03/B06).

The five community districts with the highest rate of family shelter entry were: **Morrisania/East Tremont, Mott Haven/Hunts Point, and Concourse/Highbridge** in the Bronx, and **Bedford-Stuyvesant** and **East New York** in Brooklyn (B01/B02, B03/B06, B04, K03, and K05).

Where Families Lived Prior to Shelter, by Community District

Annual Rate of Families with Children Entering Shelter per 1,000 Families, 3.5-year Average FY 2012 through First Half of FY 2015*

Rate of Shelter Entry

First-Time Homeless Are the Smallest Proportion of Families in Shelter

Over 17,000 families lived in shelter at some point between July 2014 and December 2014. Fewer than 3,000 (16%) entered shelter for the first time in the 2014 calendar year.

The majority (56%) of families with children in shelter between July 2014 and December 2014 entered shelter for the first time during the Bloomberg administration.

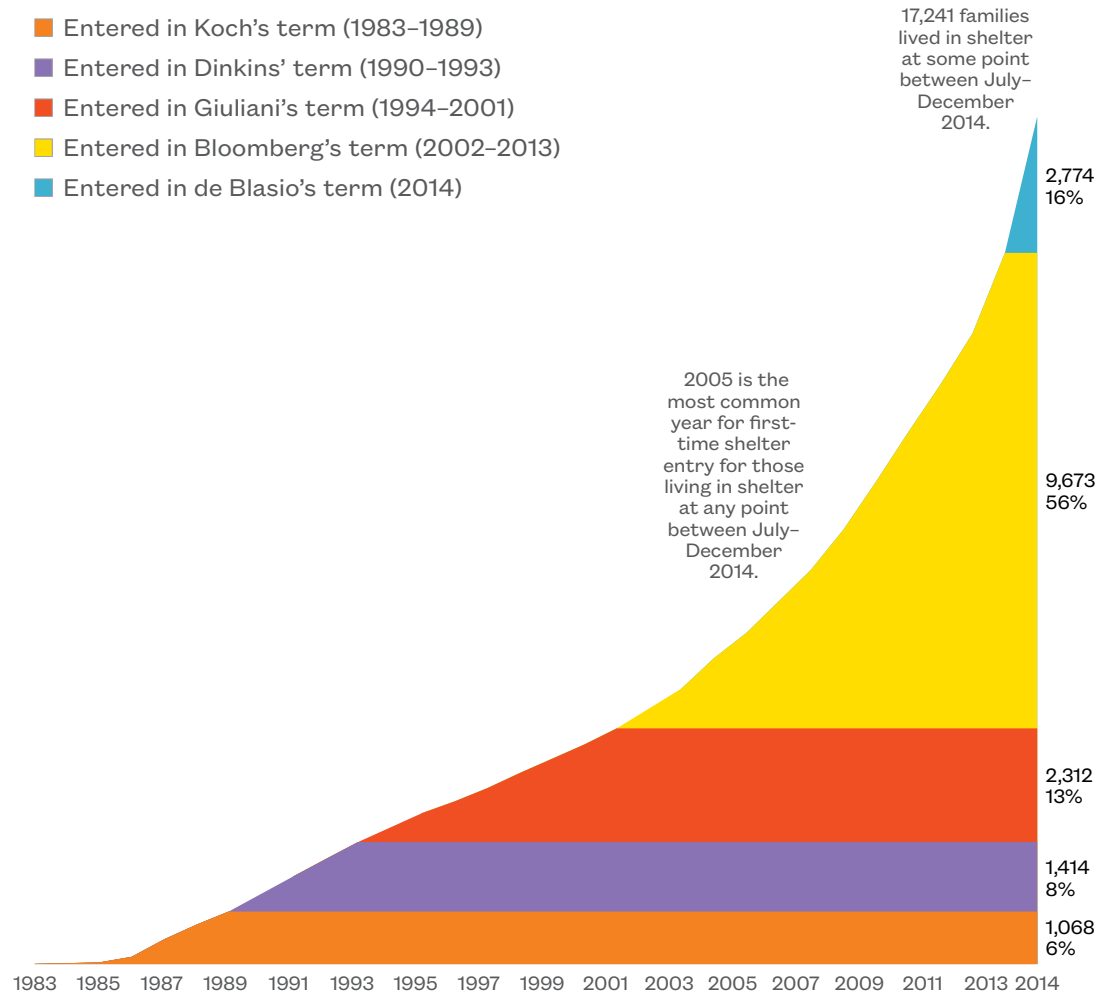

Growth in the shelter system is not due to new homeless families with children entering shelter, but to long-term stayers—families who have remained in shelter longer than one year or returned to shelter repeatedly. Eighty-four percent of families had entered shelter for the first time prior to the 2014 calendar year.

In order to reduce family homelessness, the reasons families return to shelter must be addressed. A policy focus on long-term family stability is key.

First Date of Entry into the New York City Shelter System

Number and Percent of Families with Children Living in Shelters During July–December 2014, by Year of First Ever Entry into the New York City Shelter System

- Entered in Koch’s term (1983–1989)
- Entered in Dinkins’ term (1990–1993)
- Entered in Giuliani’s term (1994–2001)
- Entered in Bloomberg’s term (2002–2013)
- Entered in de Blasio’s term (2014)

Note: Chart depicts only families that were in shelter during July–December 2014. Families are unduplicated in each year. Years refer to calendar years. Data presented here do not provide information on the length of a family’s stay in shelter or the total number of times a family stayed in shelter.

Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2015.

Rise in Rapid Return to Shelter

In FY 2015 the rate for families with children returning to shelter within one year was 17%. In FY 2005, the rate was less than 1%.

The most rapid increase in the one-year return to shelter rate took place between FY 2011 and FY 2015 when there was a 14 percentage-point increase in just four years.

The one-year return to shelter rate is an indicator of the level of housing instability families face after exiting shelter into permanent housing.

When a family returns to shelter—particularly within such a short period of time—it is both extremely destabilizing for their children’s educational and social development and costly to the city taxpayer.

Return to Shelter Rate in New York City

Percent of Families with Children that Returned to Shelter Within One Year
FY 2005–FY 2015

■ Bloomberg administration ■ de Blasio administration

Note: Figure refers to the percentage of families with children who exited New York City Department of Homeless Services (DHS) shelters to permanent housing and returned to the DHS shelter services system within one year.

Source: New York City Mayor's Office of Operations, *Mayor's Management Report*, 2009–2015.

Cluster Sites and Hotels Continue to House Large Numbers of Homeless Families

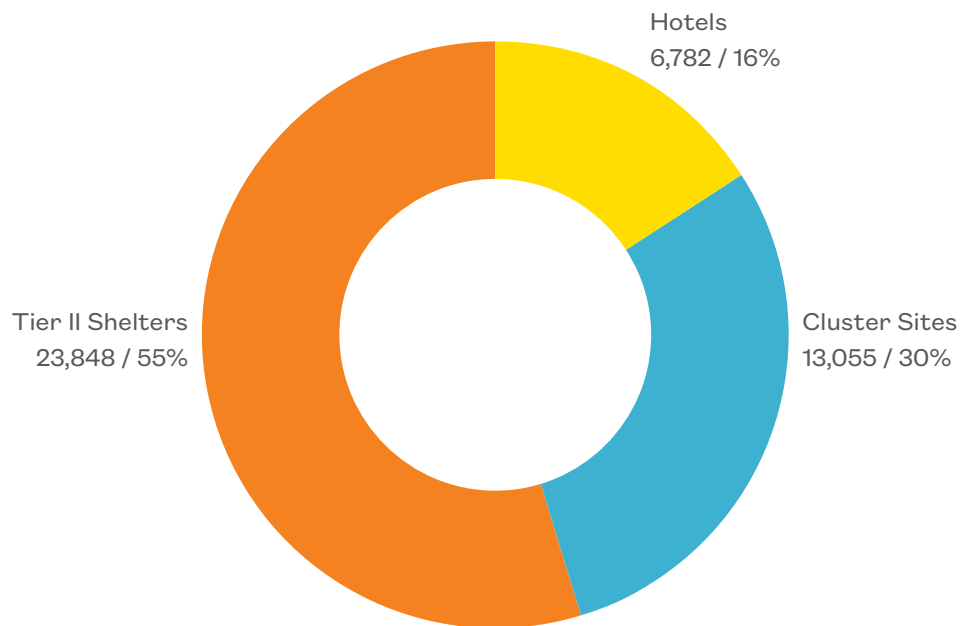

Over 43,500 parents and children lived in a family shelter in December 2014. Close to half (46%) lived in cluster site apartments and hotels.

Cluster site apartments continue to represent a significant portion (30%) of total family shelter capacity.

Cluster site apartments and hotels often lack the needed services for parents and their children that are available through contracted Tier II shelters. With close to half of all families with children living in these settings, thousands of families are not receiving the assistance they need to end their homelessness.

What Type of Shelter Do Families Live In?

Average Census of Families with Children
December 2014

Note: Percentages do not add to 100% due to rounding. The number of parents and children represented in this chart differs from the December 2014 unduplicated count given on page 10. This chart shows the average monthly census for December.

Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2015.

Tightening the Front Door: Shelter Application and Eligibility

Within three months of de Blasio's entry into office, the percentage of families found eligible for shelter rose from 39% to 57%. This brief rise in eligibility during de Blasio's first year in office as mayor, however, dropped back down to an eligibility rate that was similar to that of the last two years of his predecessor, Mayor Bloomberg.

As of August 2015, the monthly eligibility rate for family shelter was 41%. This is much lower than the six-month rate of 60% from July–December 2014 (page 25).

In August 2015 over 2,800 families applied for shelter in New York City. This is the largest number of applicants since September 2012, when over 3,100 families applied.

The more than 20 percentage-point fluctuation in eligibility rate that is seen between January 2014 and August 2015 highlights how eligibility criteria can significantly affect the number of families entering shelter.

Family Shelter Applicants and Eligibility in New York City

Number of Families with Children Applying for Shelter and Percent of Applications Found Eligible 2012–2015, by Month

Source: New York City Department of Homeless Services, *Local Law 37 Report*, 2012–2015.

Student Data Reveal the Extent of Homelessness in City Council Districts

The proportion of students who were homeless in SY 2013-14 varied greatly by City Council district ranging from 2% in District 51 in the **Arden Heights** and **Tottenville** area of Staten Island to 20% in District 14 encompassing the **Fordham** and **Kingsbridge** area of the west Bronx. The average rate of student homelessness in New York City was 8% in SY 2013-14.

City Council District 17 in the **Melrose** and **Hunts Point** area of the Bronx had the largest number of homeless students attending school out of all 51 City Council districts. In SY 2013-14 over 5,000 homeless students were enrolled in schools in District 17 and 16% of all students attending school there were homeless.

The full extent of family homelessness is not represented by the shelter census. Student homelessness serves as a proxy for the larger number of families in the city experiencing housing instability.

Student Homelessness, by City Council District

Differences in the Path to Shelter by Community

2

Differences in the Path to Shelter by Community

Family homelessness exists in every community in New York City, but the reasons why a family becomes homeless can differ greatly from one family to another, and from one community to the next. In order to increase understanding of what drives families into shelter, this section looks at the primary reasons listed on both application and shelter entry documents at the City's Prevention Assistance and Temporary Housing (PATH) center, the centralized point of entry into the family shelter system. It then examines differences in the reasons why families enter shelter by community district.

Key Findings

Over the six-month period from July–December 2014, 60% of families with children who applied for shelter were deemed eligible. This is higher than the typical monthly shelter eligibility rate during the same period, indicating that many families are forced to apply for shelter more than once before gaining entry.

The most frequent reason that families were found eligible for shelter was domestic violence (28%). By community district, the leading cause for shelter entry was split fairly evenly between eviction (30 community districts) and domestic violence (27 community districts).

While eviction accounted for 27% of all families entering shelter citywide, its importance as a driving factor for family shelter entry varied from just 9.5% of entrants in **Midtown** in Manhattan (M05) to 41.4% in the **Bedford Park** area of the Bronx (B07).

Why Families Apply for and Are Deemed Eligible for Shelter

The top three reasons for families to apply for shelter during the first half of FY 2015 were: eviction (29%), discord (28%), and domestic violence (16%).

The three primary reasons that families were determined to be eligible for shelter were: domestic violence (28%), eviction (27%), and overcrowding (19%).

Over the six-month period from July–December 2014, 60% of families with children who applied for shelter were found eligible.

The six-month eligibility rate is the proportion of families who applied for shelter over a six-month period who were deemed eligible for shelter. That the six-month eligibility rate is higher than the typical monthly eligibility rate highlights how many families who are ultimately found eligible for shelter applied more than once.

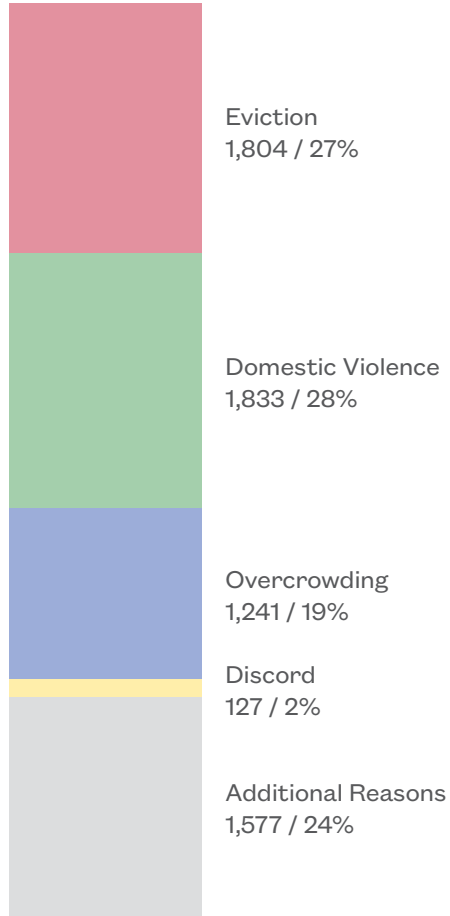

Reasons for Shelter Application, Citywide

Number and Percent of Families with Children Applying for Shelter, by Primary Reason for Application July–December 2014

Reasons Families Found Eligible for Shelter, Citywide

Number and Percent of Families with Children Found Eligible for Shelter, by Primary Reason for Eligibility July–December 2014

Note: A family's reason for application does not necessarily match their reason for eligibility. Families who applied multiple times were unduplicated by fiscal year. A list of additional reasons can be found in the Glossary of Terms.

Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2015.

Geographic Differences in Reason for Shelter Application and Entry

In all but four of the 59 New York City community districts, eviction was the leading reason families listed for applying to shelter.

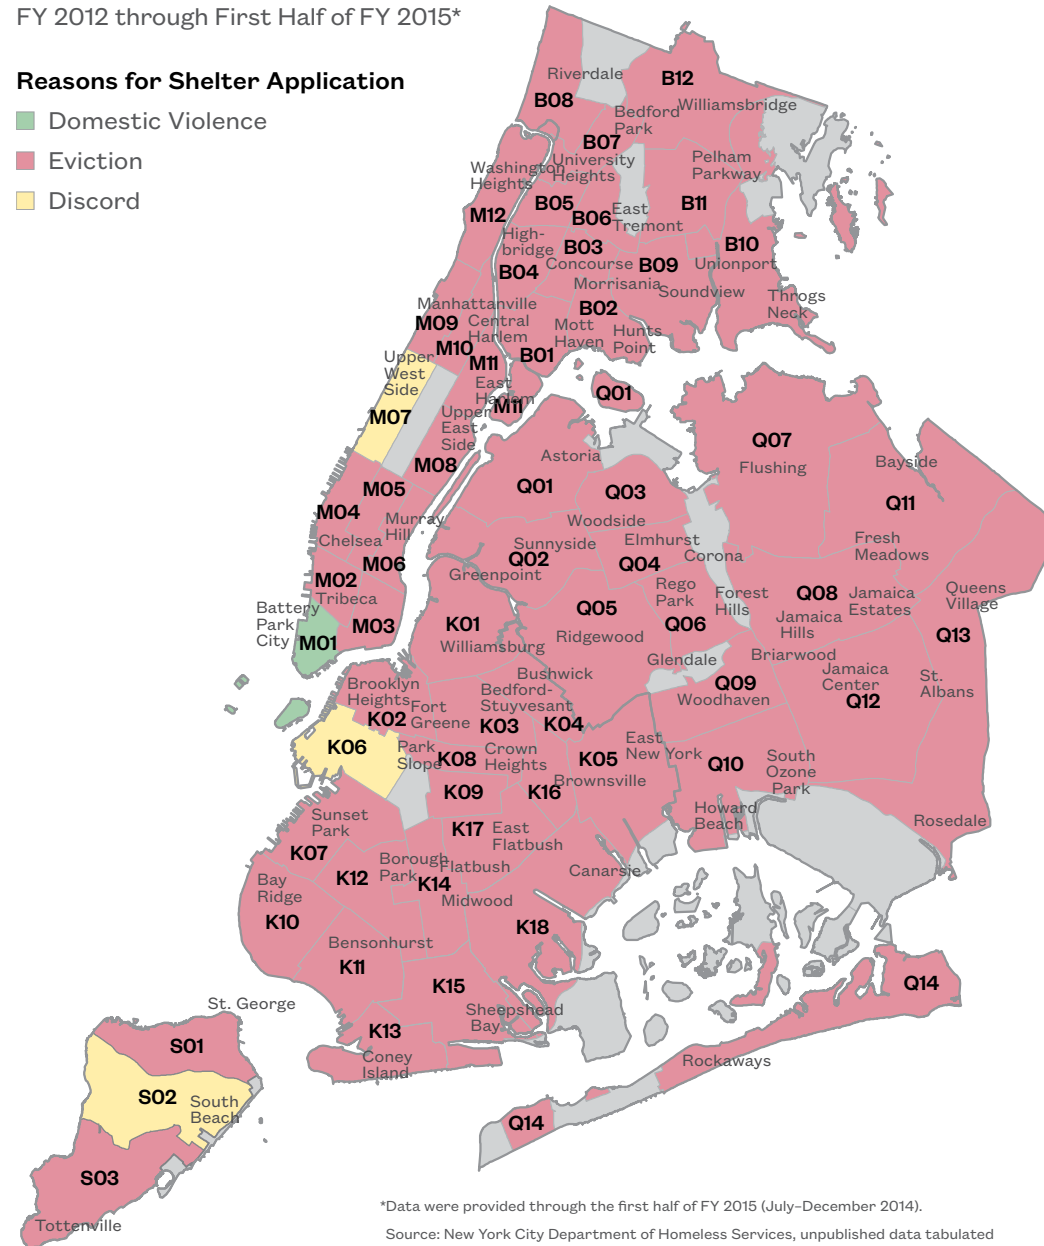

While New York City homeless prevention policy focuses on eviction, this issue may be only a symptom of the underlying problem. The factors driving homelessness are more complex.

Most Common Reason for Families with Children to Apply for Shelter, by Community District

FY 2012 through First Half of FY 2015*

Reasons for Shelter Application

- Domestic Violence
- Eviction
- Discord

*Data were provided through the first half of FY 2015 (July–December 2014).
Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2012–FY 2015.

The most frequent reason that families were found eligible to enter shelter by community district was split fairly evenly between eviction (30 community districts) and domestic violence (27 community districts).

Policies focused solely on housing are clearly limited. At the community level, domestic violence plays an equally important role as eviction in shelter entry.

Most Common Reason Families with Children Were Found Eligible, by Community District

FY 2012 through First Half of FY 2015*

Reasons for Shelter Eligibility

- Domestic Violence
- Eviction
- Immediate Return
- Overcrowding

*Data were provided through the first half of FY 2015 (July–December 2014). Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2012–FY 2015.

Reason for Shelter Eligibility by Community District Is Not the Same

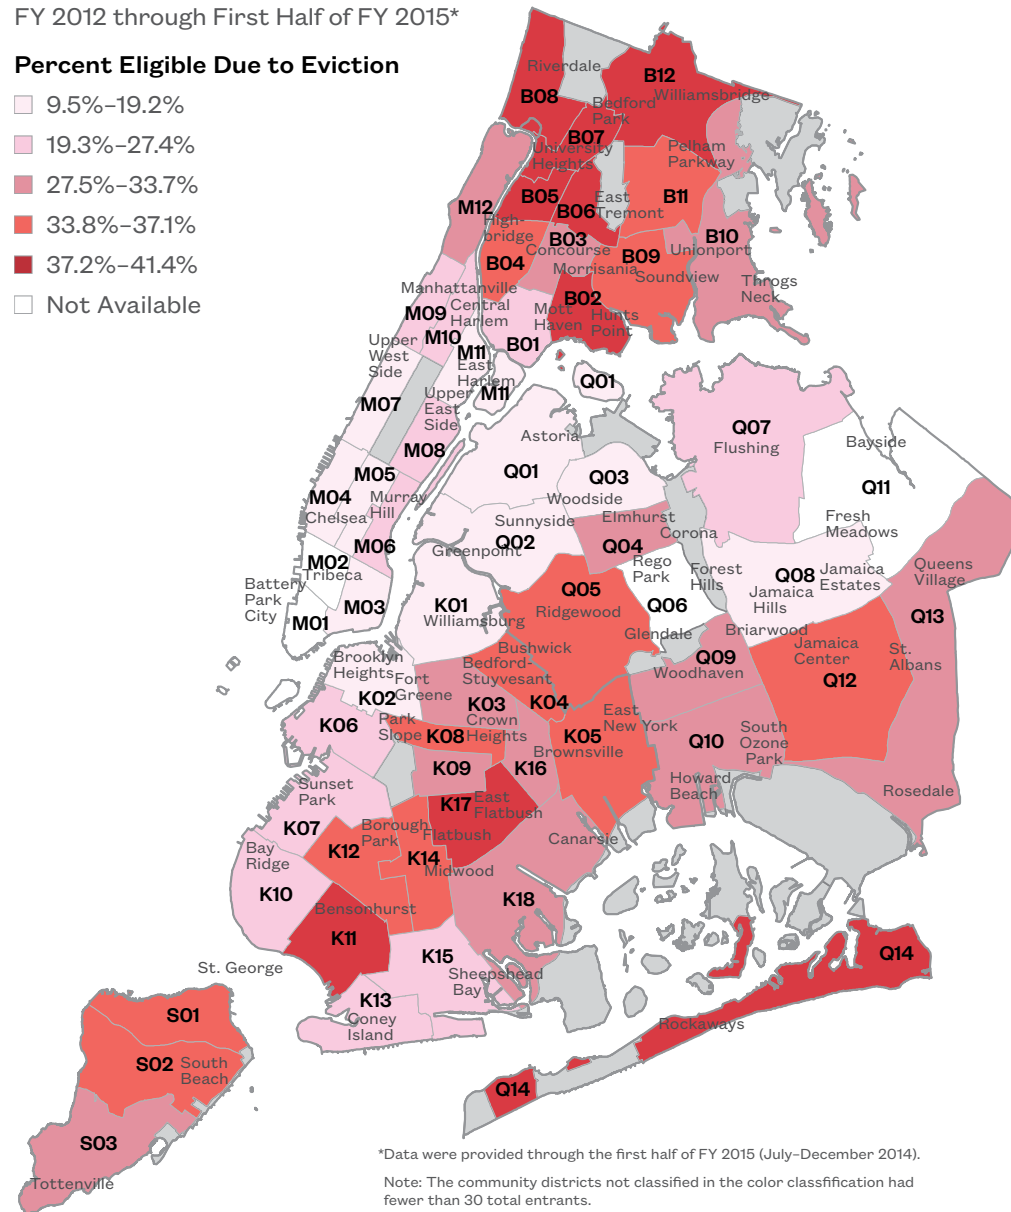

Eviction accounted for 27% of all families found eligible for shelter citywide, but its significance varied greatly by community district. At the low end, only 9.5% of families entered shelter due to eviction in **Midtown** in Manhattan (M05). At the high end, 41.4% of families entered shelter due to eviction in the **Bedford Park** area of the Bronx (B07).

Eviction as a Reason for Shelter Eligibility, by Community District

Percent of Families with Children Eligible for Shelter Due to Eviction
FY 2012 through First Half of FY 2015*

Percent Eligible Due to Eviction

- 9.5%–19.2%
- 19.3%–27.4%
- 27.5%–33.7%
- 33.8%–37.1%
- 37.2%–41.4%
- Not Available

*Data were provided through the first half of FY 2015 (July–December 2014).

Note: The community districts not classified in the color classification had fewer than 30 total entrants.

Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2012–FY 2015.

While domestic violence was the reason that 28% of all families with children were found eligible for shelter by community district, the proportion of families varied ranging from 20.9% in the **Riverdale** area of the Bronx (B08) to 46% in the **Flushing** neighborhood of Queens (Q07).

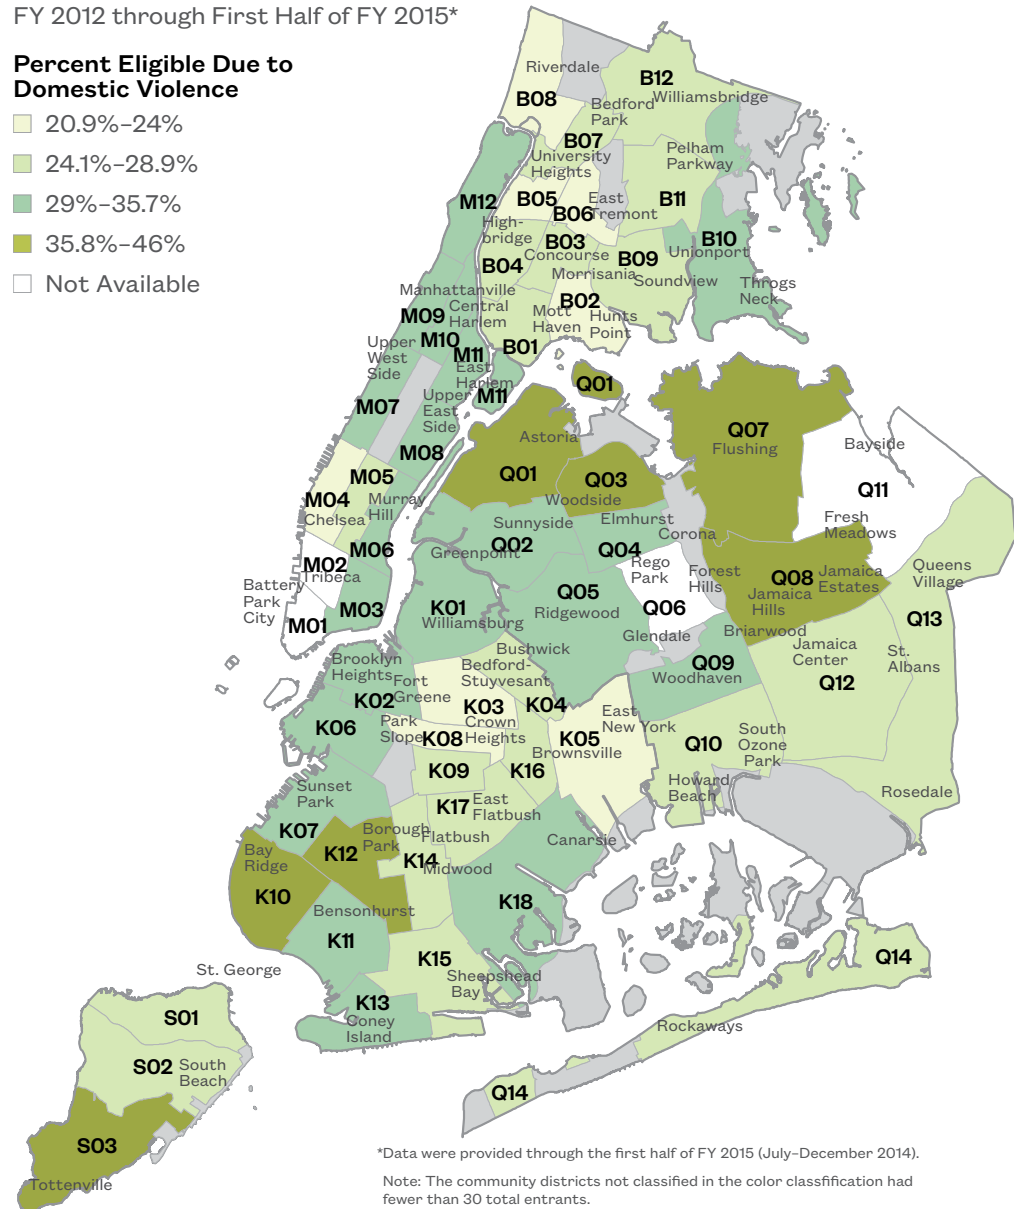

The top three citywide reasons families were found eligible to enter shelter varied greatly by community district. Understanding the local factors driving family homelessness is key to reducing shelter entry.

Domestic Violence as a Reason for Shelter Eligibility, by Community District

Percent of Families with Children Eligible for Shelter Due to Domestic Violence
FY 2012 through First Half of FY 2015*

Percent Eligible Due to Domestic Violence

- 20.9%–24%
- 24.1%–28.9%
- 29%–35.7%
- 35.8%–46%
- Not Available

*Data were provided through the first half of FY 2015 (July–December 2014).

Note: The community districts not classified in the color classification had fewer than 30 total entrants.

Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2012–FY 2015.

Citywide, overcrowding accounted for 19% of families with children who were found eligible to enter shelter. Overcrowding is defined as more than one occupant per room; however, in many cases much more severe overcrowding takes place.

By community district, the proportion of families entering shelter due to overcrowding ranged from 5.1% in **Borough Park**, Brooklyn (K12), to 27.3% on the **Upper East Side** of Manhattan (M08).

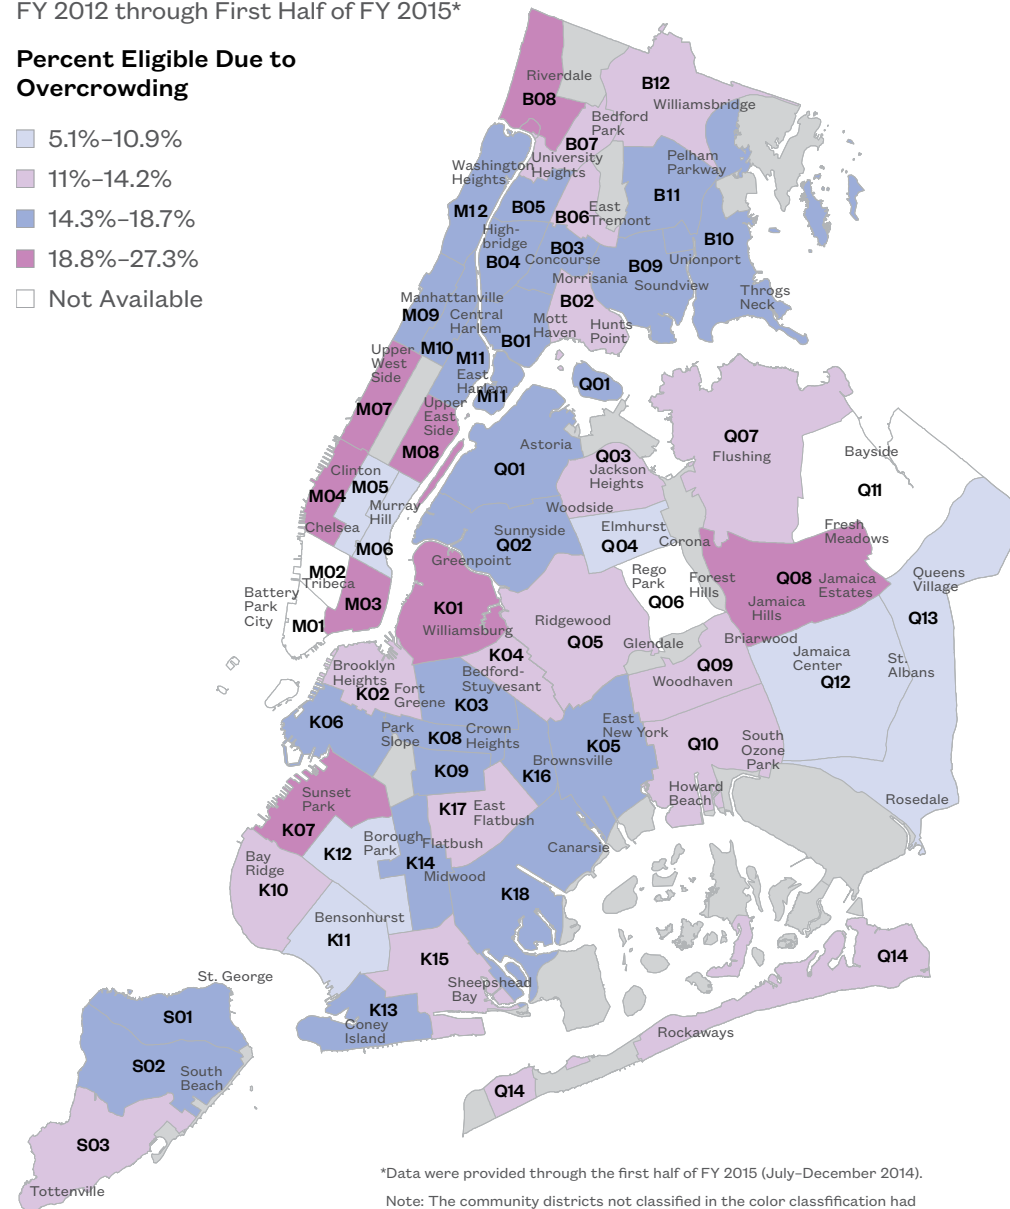

The adverse effects of overcrowding can be mitigated with public supports to address unemployment, hunger, and poor living conditions.

Overcrowding as a Reason for Shelter Eligibility, by Community District

Factors Driving Housing Instability and Homelessness

3

Factors Driving Housing Instability and Homelessness

Homelessness is the most extreme form of poverty, and those who are at the greatest risk of experiencing poverty are children. In New York City, one out of every four children (24%) lives in poverty—a fact that reflects the numerous economic and educational challenges faced in neighborhoods across the city.

While section 2 focuses on the community-level differences in the primary reason for shelter entry, section 3 uses 2013 U.S. Census Bureau data to explore the many underlying factors that contribute to a family's risk for homelessness and lead to chronic housing instability, pressuring families into the shelter system repeatedly. It begins by looking at the geographic concentration of severe rent burden in the city and then moves on to explore other community-level indicators of risk such as unemployment and low-wage employment, low educational attainment, severe rent burden, and overcrowding.

Note: Information is provided both in chart form and as maps to enable comparisons by community as well as the exploration of larger geographic patterns.

Key Findings

The ten City Council districts with the largest number of children living in poverty were: Districts 8, 14, 15, 16, 17, and 18, encompassing **East Harlem** and all of the **south and central Bronx**, and Districts 36, 37, 38, and 42, including areas of **Bushwick, Brownsville, Sunset Park, Red Hook, Bedford-Stuyvesant**, and **East New York**. Over 70,000 children lived in poverty in these districts combined.

Mott Haven/Hunts Point, Morrisania/East Tremont, University Heights, Concourse/Highbridge, East New York, Brownsville, and Bedford-Stuyvesant (B01/B02, B03/B06, B04, B05, K03, K05, and K16) ranked in the top ten community districts for both shelter entry rate and the number of single mothers in poverty with children under the age of five.

In roughly two-thirds of all City Council districts, the most common level of educational attainment was a high school diploma or less.

In 39 out of 51 City Council districts, 30% or more of residents were working in a low-wage occupation earning a median income of less than \$28,000 a year.

In the seven poorest community districts, families earning the median income while severely rent burdened, paying 50% or more of their income in rent, were left with only \$1,250 each month to pay for all other expenses including food, transportation, child care, healthcare, and clothing. These community districts included: **Mott Haven/Hunts Point, Concourse/Highbridge, Morrisania/East Tremont, and University Heights** in the south Bronx, and **Brownsville** in Brooklyn (B01/B02, B03/B06, B04, B05, and K16).

While the factors that drive homelessness are present in every community, a small number of communities in the Bronx and Brooklyn are predominantly affected. Solutions should be locally tailored.

Severe Rent Burden and Income in New York City Community Districts

Across New York City, the median income was \$52,259. Among renters, 28% were severely rent burdened, paying 50% of their income or more in rent.

In the seven community districts with the lowest median incomes, including **Mott Haven/Hunts Point, Concourse/Highbridge, Morrisania/East Tremont, and University Heights** in the Bronx and **Brownsville** in Brooklyn (B01/B02, B03/B06, B04, B05, and K16), families who were earning the median income and severely rent burdened only had \$1,250 per month left over to pay for all other expenses including food, healthcare, transportation, child care, and clothing.

Severe rent burden places families in some communities at a greater risk for homelessness than others because the amount of money a family has to live on each month once the rent is paid varies widely due to income.

Income and Severe Rent Burden, by Community District

Median Household Income and Number of Households Spending 50% or More of Income on Rent

Overcrowding in New York City Community Districts

More than one occupant per living space constitutes overcrowding (not including bathrooms or most kitchens). However, in many cases much more severe overcrowding takes place. Across New York City the average rate of overcrowding was 11%. By community district, overcrowding ranged from a low of 3% in the **Throgs Neck** neighborhood of the Bronx (B10) to a high of 25% in **Jackson Heights**, Queens (Q03).

Four community districts had overcrowding rates that were 22% or higher. These Districts included **Sunset Park** and **Borough Park** in Brooklyn (K07 and K12), and **Elmhurst/Corona** and **Jackson Heights** in Queens (Q03 and Q04).

Overcrowding could indicate that families are living doubled up, which is the most frequently reported situation for families with children prior to entering shelter.¹

¹ National Alliance to End Homelessness, *State of Homelessness 2012—Chapter Three: Demographics of Homelessness*, January 17, 2012.

Low-Wage Employment in New York City Council Districts

Over one-third of employed New Yorkers were in low-wage occupations earning below \$28,000 per year. This ranged from 16% on the **Upper West Side** of Manhattan (District 6) to 54% in the **Fordham/Morris Heights** area of the Bronx (District 14).

In 39 out of 51 City Council districts, 30% or more of residents were working in a low-wage occupations.

In the top ten City Council districts, between 44% and 54% of all people working were employed in low-wage occupations. These City Council districts included **East Harlem**; all of the **south and central West Bronx**; **Flushing, Corona, Jackson Heights, and Elmhurst** in Queens; and **Sunset Park, Bushwick, and Red Hook** in Brooklyn (Districts 8, 14, 15, 16, 17, 20, 21, 25, 37, and 38).

Low-wage employment is a significant contributor to housing instability and homelessness, particularly in areas such as the south and central West Bronx that also struggle with high rates of unemployment.

Low-Wage Occupations, by City Council District

Number and Percent of Employed People Working in Low-Wage Occupations (Median Income Less than \$28,000 per Year)

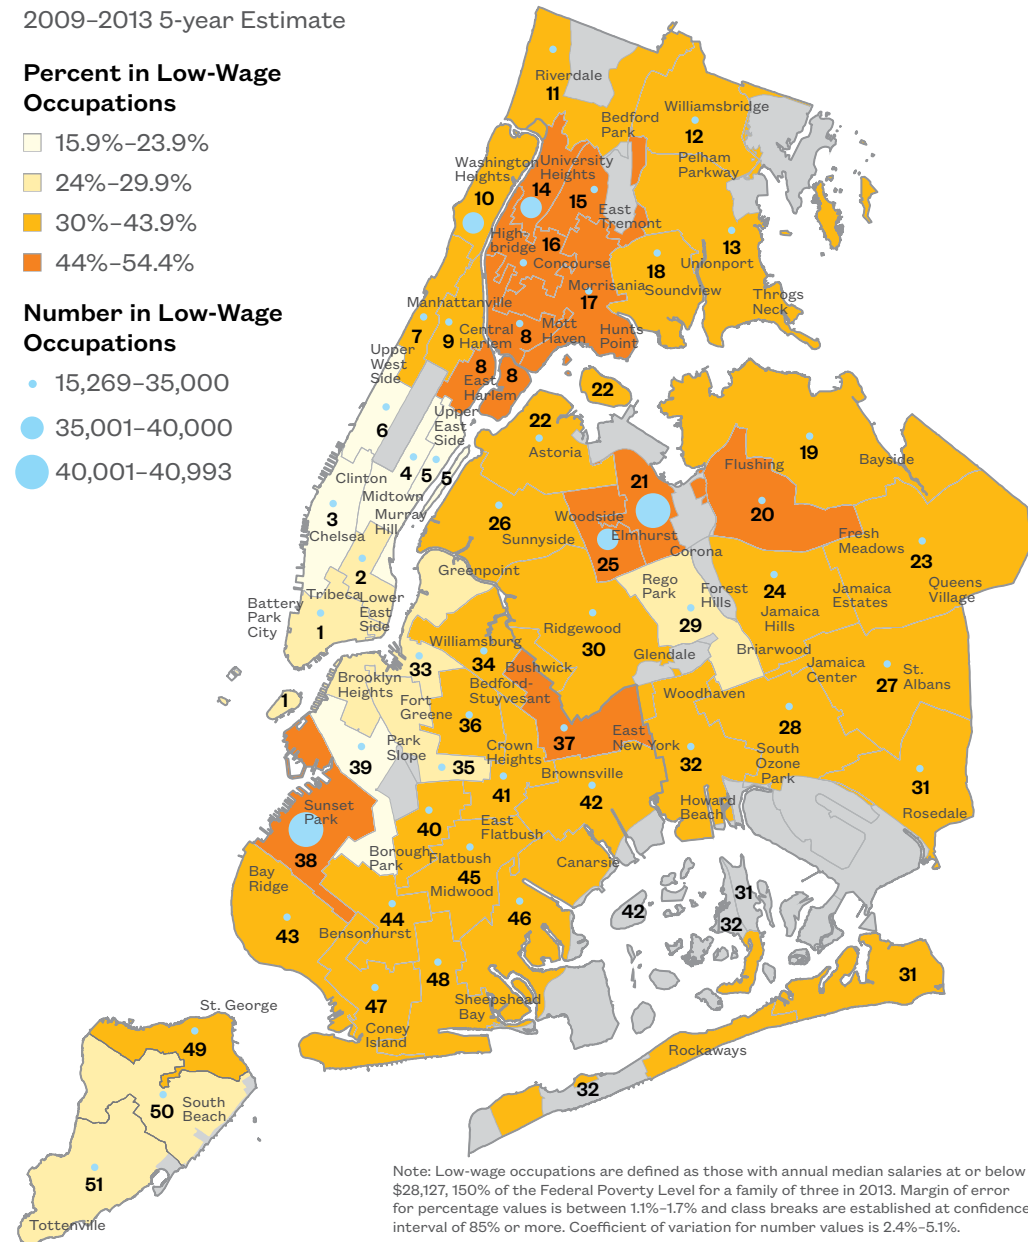

2009–2013 5-year Estimate

Percent in Low-Wage Occupations

- 15.9%–23.9%
- 24%–29.9%
- 30%–43.9%
- 44%–54.4%

Number in Low-Wage Occupations

- 15,269–35,000
- 35,001–40,000
- 40,001–40,993

Note: Low-wage occupations are defined as those with annual median salaries at or below \$28,127, 150% of the Federal Poverty Level for a family of three in 2013. Margin of error for percentage values is between 1.1%–1.7% and class breaks are established at confidence interval of 85% or more. Coefficient of variation for number values is 2.4%–5.1%.

Unemployment in New York City Council Districts

The unemployment rate ranged by City Council district from 5% on the **Upper East Side** of Manhattan (District 4) to 19% in the **Fordham/Morris Heights** area of the Bronx (District 14) in 2013. During the same period the rate was 11% citywide.

The top five City Council districts for highest unemployment were Districts 14, 15, 16, and 17 in the **south and central West Bronx**, and District 10 in **north Manhattan**.

City Council Districts 14, 15, 16, and 17 also were among the top five districts with the greatest number of homeless students, a proxy for those living doubled up in unstable housing situations.

Shelters in districts with high unemployment could serve as locations for City-funded employment programs serving both the shelter population and the surrounding community.

Unemployment, by City Council District

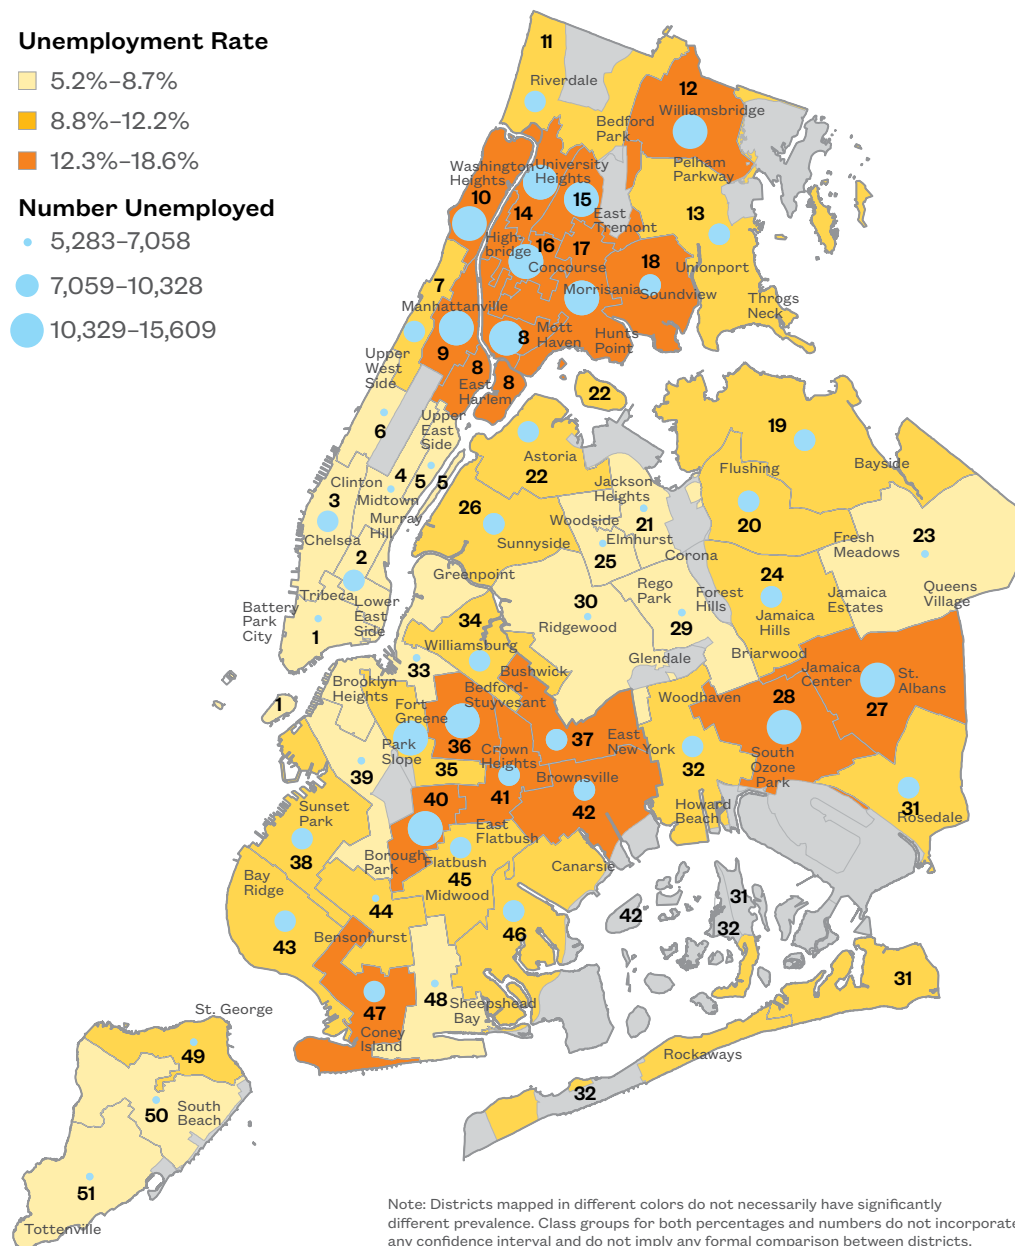

2009–2013 5-year Estimate

Unemployment Rate

- 5.2%–8.7%
- 8.8%–12.2%
- 12.3%–18.6%

Number Unemployed

- 5,283–7,058
- 7,059–10,328
- 10,329–15,609

Note: Districts mapped in different colors do not necessarily have significantly different prevalence. Class groups for both percentages and numbers do not incorporate any confidence interval and do not imply any formal comparison between districts. Margin of error for percentage values is between 0.6%–1.3%. Coefficient of variation for number values is 4.3%–7.8%

Educational Attainment in New York City Council Districts

In New York City 45% of people 25 years and older had attained only their high school diploma or less. Specifically, one in five (20%) residents had not finished high school.

For roughly two-thirds of City Council districts, the most common level of education was a high school diploma or less. In 13 out of 51 City Council districts, the most common level of education was less than a high school diploma.

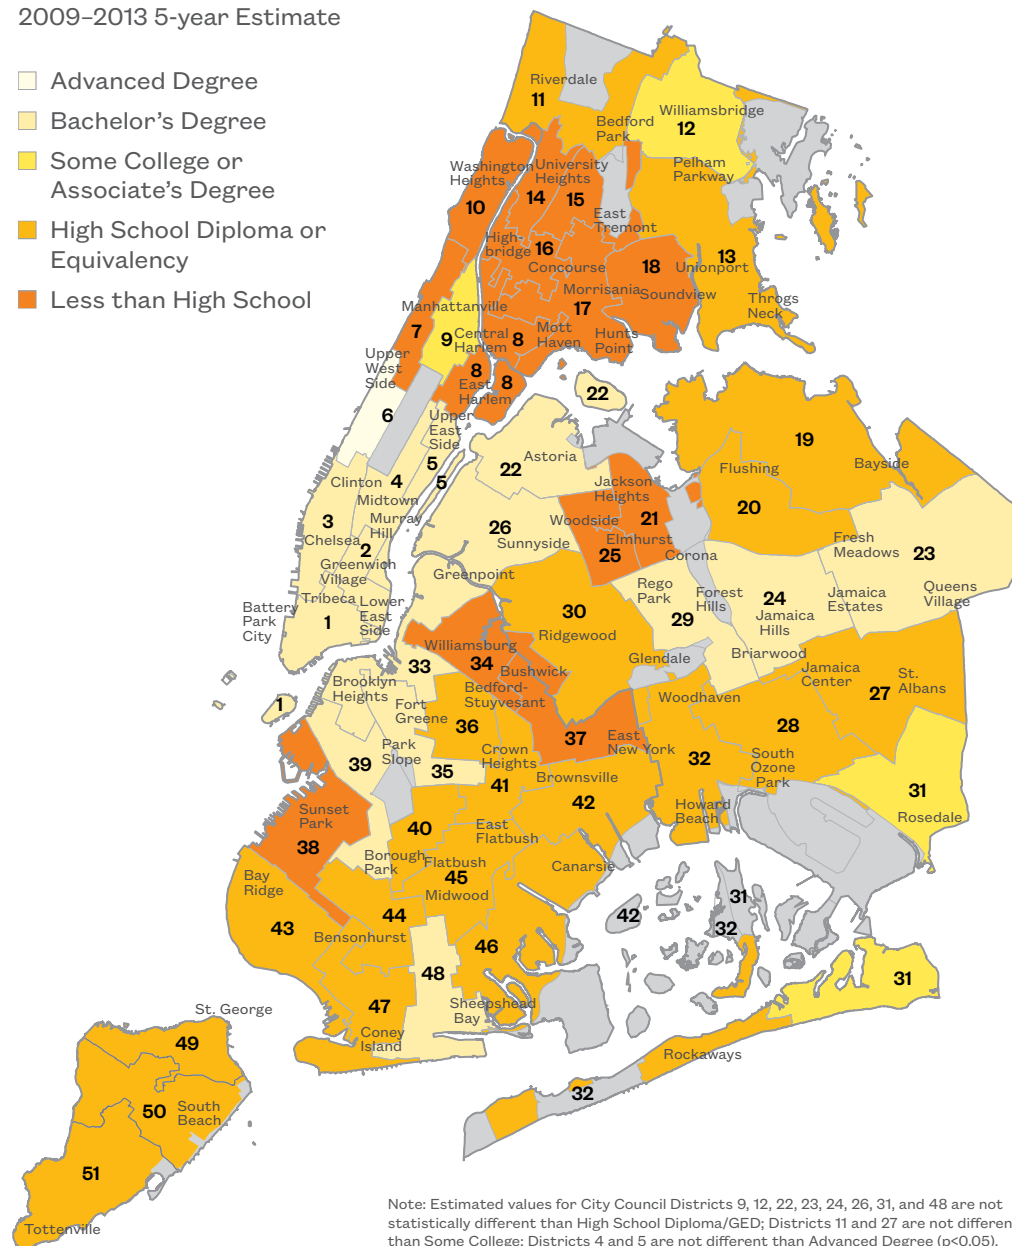

In nine out of thirteen City Council districts whose most common level of educational attainment was less than high school, there was also higher than average (8%) student homelessness. These included **northern Manhattan, East Harlem**, all of the **central and south Bronx**, and the **Bushwick/Brownsville** area of Brooklyn (Districts 7, 8, 10, 14, 15, 16, 17, 18, and 37).

Adult basic education along with job training must be included in any strategy aiming to prevent homelessness or reduce the return to shelter rate.

Education, by City Council District

Most Common Level of Educational Attainment Among Adults 25 Years or Older
2009–2013 5-year Estimate

- Advanced Degree
- Bachelor's Degree
- Some College or Associate's Degree
- High School Diploma or Equivalency
- Less than High School

Note: Estimated values for City Council Districts 9, 12, 22, 23, 24, 26, 31, and 48 are not statistically different than High School Diploma/GED; Districts 11 and 27 are not different than Some College; Districts 4 and 5 are not different than Advanced Degree ($p < 0.05$). Margin of error is between 0.4%–1.5%.

Households Receiving Public Assistance

Roughly 129,000 (4%) households in New York City received public assistance in 2013. These families were most heavily concentrated in the **south and central Bronx, central Brooklyn, and Harlem** (Districts 8, 14, 15, 16, 17, and 36), areas that all struggle with high rates of family shelter entry.

Public assistance is an important safety net for struggling families but it can add to their housing instability if they unexpectedly lose benefits. In 2013, 23% of children and adults applying for shelter were part of cases that had been sanctioned or closed due to alleged non-compliance within the prior 12 months.¹

¹ New York City Human Resources Administration/Department of Social Services, *Testimony of Steven Banks, Commissioner of the New York City Human Resources Administration, At the New York State Senate—Task Force on Social Service Delivery in New York City*, October 7, 2015.

Single Mothers with Young Children Living in Poverty

Over 19,000 single mothers with children under five live in poverty in New York City, but by community district, the number ranged from zero on the **Upper East Side of Manhattan (M08)** to over 1,200 in **Mott Haven/Hunts Point (B01/B02)**.

Seven out of the ten community districts with the largest number of single mothers with children under five living in poverty were also among the top ten community districts for the rate of family shelter entry. These districts included all of the **south and central West Bronx, East New York, Brownsville, and Bedford-Stuyvesant (B01/B02, B03/B06, B04, B05, K03, K05, and K16)**.

Single mothers with children under five living in poverty experience high rates of severe rent burden, often inflexible work schedules in low-wage occupations, and a lack of quality affordable child care. Addressing these issues is key to reducing family homelessness.

Families Entering Shelter and Single Mothers with Young Children Living in Poverty, by Community District

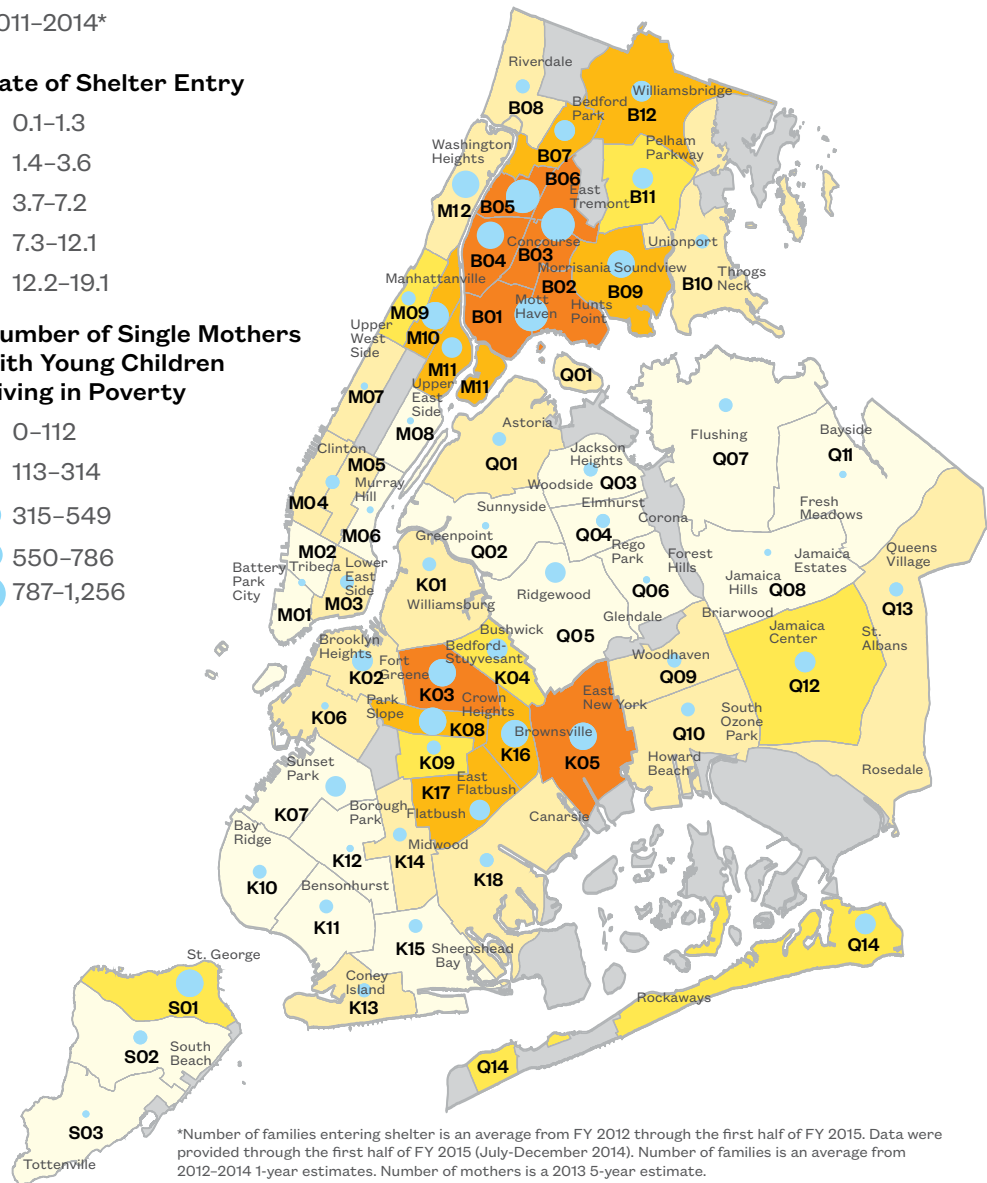

Annual Rate of Families with Children Entering Shelter per 1,000 Families (3.5-year Average) and Single Mothers with Children Under 5 Years Old Earning Below the Federal Poverty Level 2011-2014*

Rate of Shelter Entry

- 0.1-1.3
- 1.4-3.6
- 3.7-7.2
- 7.3-12.1
- 12.2-19.1

Number of Single Mothers with Young Children Living in Poverty

- 0-112
- 113-314
- 315-549
- 550-786
- 787-1,256

*Number of families entering shelter is an average from FY 2012 through the first half of FY 2015. Data were provided through the first half of FY 2015 (July-December 2014). Number of families is an average from 2012-2014 1-year estimates. Number of mothers is a 2013 5-year estimate.

Source: New York City Department of Homeless Services, unpublished data tabulated by the Institute for Children, Poverty, and Homelessness, FY 2012-FY 2015; U.S. Census Bureau, 2009-2013 American Community Survey 5-year Estimates; U.S. Census Bureau, American Community Survey 1-year Estimates, 2012-2014.

Single Mothers with Young Children Living in Poverty, by Community District

Number of Single Mothers with Children Under Five Years Old Earning Below the Federal Poverty Level

2009–2013 5-year Estimate

Manhattan	2,423
Bronx	6,672
Brooklyn	6,608
Queens	2,736
Staten Island	882
New York City	19,321
New York State	43,805
United States	807,953

Note: Community district maps and tables were created using five-year estimates in order to allow for comparison across multiple geographic levels. Coefficient of variation (CV) for average number of family households is 1.6%–4.5%. CV for mothers is 11%–96%. Districts M03–05, M09–12, B01–04, B06–12, K01–05, K07–11, K14–18, Q01, Q03–05, Q07, Q09, Q10, Q12–14, S01, and S02 have medium reliability for the number of mothers. Districts M01, M02, M06, M07, K06, K12, K13, Q02, Q06, Q08, Q11, and S03 have low reliability for the number of mothers and should be used with caution.

Children Living in Poverty

The rate of children living in poverty ranged by City Council district from 4% in the **Lenox Hill/Roosevelt Island** area of Manhattan (District 5) to 46% in the **West Bronx/Highbridge** area of the Bronx (District 16). Citywide, the average was 24%.

The top ten City Council districts with the largest number of children living in poverty were: districts encompassing **East Harlem** and all of the **south and central Bronx** (Districts 8, 14, 15, 16, 17, and 18), and districts including areas of **Bushwick, Brownsville, Sunset Park, Red Hook, Bedford-Stuyvesant, and East New York** (Districts 37, 38, 41, and 42). Each of these City Council districts had over 7,000 children living in poverty.

Districts 8, 14, 16, 37, and 42 all include neighborhoods with high rates of family shelter entry.

It is important to ensure access to services in districts with both high levels of childhood poverty and shelter entry.

Child Poverty, by City Council District

Number and Percent of Households with Children Living in Poverty
2009–2013 5-year Estimate

Percent in Poverty

- 3.5%–15%
- 15.1%–43%
- 43.1%–45.5%

Number in Poverty

- 446–1,299
- 1,300–6,999
- 7,000–8,999
- 9,000–10,974

Note: The Federal Poverty Level for a family of three was \$18,751 in 2013 and \$19,055 in 2014. Margin of error for percentage values is between 1.8%–3.8% and class breaks are established at confidence interval of 88% or more. Coefficient of variation for numbers is 4%–39% and class break confidence interval is 89% or more. City Council Districts 3, 4, 5, 6, 19, 23, 29, 50, and 51 have medium data reliability.

Poverty in New York City Council Districts

The percentage of residents who lived below the Federal Poverty Level ranged from a low of 6% in **Tottenville** (District 51) to a high of 40% in **Morrisania** (District 17); citywide, the rate was 20%.

Five City Council districts (8, 14, 15, 16, and 17) encompassing **East Harlem** and the **south and central West Bronx** had poverty rates of 35%–40%.

In one-third of City Council districts, more than one out of every four people lived in poverty (25%).

To effectively reduce the homeless family census, the factors which keep families poor, such as low educational attainment and limited job skills, must be directly addressed.

Poverty, by City Council District

*City Council District 8 was ranked 3rd in both Manhattan and the Bronx. City Council District 34 was ranked 7th in Brooklyn and 15th in Queens.
Note: "–" indicates that data would display 10 or fewer homeless students. Unless otherwise noted, data are from SY 2013-14.

Glossary of Terms

Additional Reasons for Shelter

Application and Eligibility

Additional reasons families were found eligible for shelter included ACS-Related, Crime Situation, Immediate Return, Financial Strain, Lockout, Other, and Unlivable Conditions. Additional reasons for shelter application included Add-On Child, Crime Situation, Discharge from Medical Hospital, Discharge from Non-Hospital Facility/Program, DV from HRA Shelter, Fire/Flood/Other Disaster, Foreclosure, Hurricane Sandy, Left Facility/Program on Own Accord, Left Facility Against Medical Advice, Medical Reason, Newborn, Other, Prior Application Closed in Error, Recently Aged Out of Foster Care, Referred by Agency, Released from Jail/Rikers, Released from Prison, Returning Veteran, Sanctioned, Street Homeless, Unlivable Conditions, and Vacate Order.

Child Poverty

Children under the age of 18 living in households that are earning below the Federal Poverty Level (see “Poverty”).¹

Educational Attainment

The highest level of education that a person has received. Educational attainment in this *On the Map* is limited to people aged 25 or older and is divided into the following categories: Less than High School, High School Diploma or High School Equivalency, and More than High School (includes Some College or Associate’s Degree, Bachelor’s Degree, and Advanced Degree).

Elementary School

Kindergarten through 5th grade.

Family Homelessness

Homeless families are defined by two separate categories: “families with children” are one- or two-parent households with children under 21, while “adult families” consist of couples or related family members without children under 21. Families with children and adult families have separate shelter systems and must be screened for eligibility upon applying for shelter, although the law requires that they be temporarily housed during this process. Prior to 2008, data that separate families with children and adult families are not available.²

² New York City Department of Homeless Services, *Data Dashboard Category Definitions, FY 2012*.

Family Homeless Shelter

There are three different categories of family shelters serving New York City Department of Homeless Services (DHS) clients with children: Tier II shelters, cluster site apartments, and hotels. The level and availability of social services, including child care and case management, at each shelter location varies greatly.¹

Cluster Site Apartments: DHS utilizes space in privately-owned residential buildings that house both rent-paying tenants and DHS clients or exclusively DHS clients. Cluster site apartments were found by the New York City Department of Investigations to be the worst maintained and most poorly monitored of all three types of family shelters, as well as offering the least adequate social services to families. Many cluster site apartments do not have contracts with the City.²

Hotels: DHS utilizes private hotel capacity to shelter homeless families. These hotels are for-profit institutions that do not operate under City contracts. Hotel operators provide private rooms with kitchenettes and generally limited services. In some instances, individual rooms are rented in hotels and motels on a per diem basis.³

Tier II Shelters: Typically the best maintained of all types of family shelters with the most social services to occupants. Most Tier II shelters are run by nonprofit organizations in privately-owned buildings, operate under contracts with the City, and are regulated by both the city and state. Shelter operators provide private rooms for homeless families, along with kitchen facilities or food service.⁴

Family Educational Rights and Privacy Act (FERPA)

A federal law that protects the privacy of student education records for schools that receive applicable program funds from the U.S. Department of Education.⁵

Family Shelter Eligibility Rate

The number of families with children found eligible to enter NYC Department of Homeless Services (DHS) shelters per the number of families with children that submitted an application. The rate was calculated by the ICPH using unpublished data from DHS.

Family Shelter Entry Rate

This rate is the number of families with children entering NYC Department of Homeless Services (DHS) shelters per 1,000 families living in the community.

Family Shelter Unit

A self-contained, furnished room in a family shelter. Family shelter capacity is counted in units, which usually serve two to four people, rather than being counted as beds, as is done in the single individual homeless population.⁶

High School

9th through 12th grade.

⁶ New York City Department of Investigation, *DOI Investigation of 25 City-run Homeless Shelters for Families Finds Serious Deficiencies*, March 12, 2015.

Homebase

A program introduced citywide in 2004 by the New York City Department of Homeless Services to offer homelessness prevention services in individual communities. Offices are operated by contracted social services providers and staffed with caseworkers offering services such as landlord mediation, emergency rental assistance, and benefits enrollment.¹

Long-Term Stayers

Individuals and families who have been continuously homeless for at least one year or have had at least 4 episodes of homelessness in the past three years.

Low-Cost Housing Units

Housing units renting for less than \$1,500 per month. This threshold was determined by the total maximum rent allowed for a homeless family exiting shelter if they are using a typical subsidy such as a Living in Communities (LINC) program voucher.

Low-Wage Occupations

Occupations with annual median salaries at or below \$28,127 in 2013, 150% of the Federal Poverty Level for a family of three.²

Middle School

6th through 8th grade.

Mothers in Poverty with Children Under Five Years Old

A measure of community vulnerability to homelessness, as mothers in poverty with young children are among those most likely to enter shelter.

Overcrowding

Housing is considered overcrowded when there is an average of more than one person per room in the unit, not including bathrooms or most kitchens.³

Poverty (Federal Poverty Level)

The Federal Poverty Level was first calculated to represent the minimum income an average family needed to afford food and other basic expenses. The 2013 Federal Poverty Level for a family of three was \$19,530. For a family of four it was \$23,550.⁴

Pre-Kindergarten (pre-K)

All children who turn four before January 1st of a given school year are eligible to apply for New York City's Pre-Kindergarten Program. Programs are operated by both the New York City Department of Education and community-based organizations.⁵

Public Assistance

Public assistance is a monthly cash payment administered through the New York City Human Resources Administration/Department of Social Services (HRA/DSS). Families found eligible can receive assistance for up to five years through the federal Temporary Assistance to Needy Families (TANF) Program, after which aid can be converted to New York State's Safety Net Program.⁶

Reason for Shelter Application

The primary reason that a family lists on their application to enter a New York City Department of Homeless Services (DHS) shelter. DHS investigates this reason by examining documents, visiting former homes, and/or interviewing the applicant's family and friends. If no other housing is deemed viable, then the family is found eligible to enter a shelter.¹

Discord: Physical harm inflicted among family members that is not judged to be domestic violence.

Domestic Violence: Physical harm inflicted between intimate partners. In New York City, almost half (47%) of all homeless heads of households had experienced domestic violence during their adult lives.²

Eviction: Forcing a tenant out by legal process.

Reason for Shelter Eligibility/Entry

The primary reason that a family is found eligible to enter a New York City Department of Homeless Services (DHS) shelter, based on the DHS investigation. A family's reason for shelter entry does not necessarily match their initial reason for applying to shelter.

Domestic Violence: See "Reason for Shelter Application."

Eviction: See "Reason for Shelter Application."

Immediate Return: Families who left a shelter, usually due to eligibility reasons like missing documentation, and reapplied within a very short time.

Overcrowding: See "Overcrowding."

Rent Burden

Rent burden generally describes the situation in which renters pay such a high percentage of their monthly income for housing that paying for other basic living expenses becomes difficult. When renters pay 30% or more of their income to rent, they are considered "rent burdened," and at 50% or more, they are "severely rent burdened."³

Repeat Entrant

Individuals and families who are entering a New York City Department of Homeless Services shelter for the second, third, or more time.

Single Adult Homeless Shelter

Like family shelters, most single adult homeless shelters contract with the City but are privately owned. There is a wider variety in the types of facilities available to singles, including shelters that specialize in adults within specific age groups, adults dealing with substance abuse or mental illness, or veterans.⁴

⁴ New York City Department of Investigation, *DOI Investigation of 25 City-Run Homeless Shelters for Families Finds Serious Deficiencies*, March 12, 2015.

Student Homelessness

The New York City Department of Education defines a student as homeless who lacks a fixed, regular, and adequate nighttime residence. Homeless students include, but are not limited to, the two main categories used in *On the Map: The Dynamics of Family Homelessness in New York City*.¹

Doubled up: Students living with another family or other person due to loss of housing or economic hardship.

Sheltered: Students living in City-funded or City-operated emergency or transitional shelter.

Unemployment

Civilians 16 years or older who are not working, despite actively searching for work and being able to start a job.²
